

ACCRA INSTITUTE FACULTY STUDENT PORTAL

CAMPUS ACCESS & ATTENDANCE SYSTEM

PROPOSAL
To the Institute Administrator

A system that lets every campus gate **verify who belongs on campus in seconds** and keeps a **single, time-stamped record** of who is on site — live, across all five campuses, from one place.

THE PROBLEM

- Gates admit people on **trust and memory** — there is no fast way to confirm a student or visitor truly belongs.
- There is **no reliable record** of who is on campus at any given time, or when they arrived and left.
- Each campus operates on its own — the institute has **no single picture** of activity across its locations.

WHAT THE SYSTEM DOES

Students register once (name + phone) and carry a personal code. At the entrance, security scans the code and gets an **immediate, verified answer**: *registered student of this campus* — or not. Every entry is logged automatically with a timestamp. No notebooks, no guesswork.

WHAT IT GIVES THE INSTITUTE

Live

WHO IS ON CAMPUS NOW

One

TRUSTED RECORD & AUDIT TRAIL

Five

CAMPUSES, ONE STANDARD

- **Safety first.** In an emergency, the institute knows exactly who is on each campus — instantly.
- **Accountability.** Verified attendance and entry logs that settle any dispute without argument.
- **Gate control.** Unauthorized people are identified and recorded at the door, not after an incident.
- **Central view, local control.** One system serves Tesano, Cantonment, Ashiaman, Legon and Tema — leadership sees everything, each campus manages only its own.
- **Professional image.** A modern, managed front door reflects an institution that takes order and safety seriously.

THE ASK

Adopt this as the institute's official access system. It is **already live and working today** — I can demonstrate it in two minutes. My proposal: run it officially at one campus for a week, review the daily reports, then roll out to the rest.

Cost is minimal: hosting only (~\$25/month, less on a yearly plan). No new hardware — students and gate staff already have phones. I will train the security teams and provide simple one-page guides.
